

Regional Cooperation for Black Sea River Basins Environment Protection from Agricultural Polluters

MAIN PROJECT OUTPUTS & RESULTS

The joint action was executed in partnership of 6 organizations from 5 different countries. The project activities included

- 8 trainings in 5 countries,
- 4 project workshops in 4 different countries
- a conference for the representatives of the participant countries.

The above events were organized for different stakeholders and groups of interest, such as local population, local authorities, researchers and research institutions, civil society representatives, local non-governmental organizations and joint action partner organizations.

Permanent relations were established, developed and strengthened among the joint action partners target groups and different institutions/agencies active in the environmental sector in 5 different countries.

Joint action considered adopting innovations, achieving new skills and competences, research and training initiatives in environmental protection, the number of which will be increased during the post-project implementation period.

As the result of the program, a special model 'River Basins Protection from Agricultural Polluters – Environmental Action Programs (EAP)' have be created for 4 rivers in 5 countries that will contribute to develop scientific, technical and administrative competencies for water system environment protection.

The following EAP reports were created and disseminated among relevant authorities and stakeholders:

- River Rioni Basin Protection from Agricultural Polluters – Environmental Action Program (as a model), in Georgian and in English;
- River Kamchia Environmental Action Program for River Basins Protection from Agricultural Polluters (as a model), in Bulgarian and in English;
- River Prut, River Basin Protection from Agricultural Polluters – Environmental Action Program (as a model action program for the targeted part of river basin located in different countries Moldova & Romania), in Romanian and in English;
- Sakarya River Basin Protection from Agricultural Polluters – Environmental Action Programs (as a model action program for a targeted part of the river basin), in Turkish and in English.
